PART I — HOSPITAL ECONOMICS FOR NURSES: BEHIND THE SCENES OF THE BUSINESS OF HEALTH CARE

Registered nurses are responsible for ensuring that patients receive safe, therapeutic, and effective care. Yet, every day across the country nurses are told that hospitals are not budgeted for the care that patients need. This class investigates the basic economic structures of hospital operations in the United States, focusing on demystifying how executives use the language of economics to justify their decisions. The class also addresses how market-driven medicine encourages nurses to prioritize economic choices over clinical judgment and the moral distress it creates. It will include interactive activities for developing a basic economic vocabulary; offering nurses useful frameworks for understanding the fundamental tension between bedside care and the medical marketplace. In addition to explaining the different elements of diverse types of hospitals, this class will address how economic decisions in the hospital industry impact care, communities, and the national gross domestic product (GDP).

COURSE OBJECTIVES

Upon completion of Part I of this class, participants will be able to:

- Compare and contrast the basic economic structure of private, for-profit, non-profit, publicly-traded, and publiclyowned hospitals.
- Recognize how market pressures outside influence budget decisions inside the hospital industry.
- Identify the downstream health and social consequences of the financial choices hospital executives make.
- Explain the basic economic and moral investments of different kinds of health care systems.

PART II — THE SCIENCE OF JOY AND SOLIDARITY

This class examines the immediate and long-term health, social. and economic benefits of organized collective action. It explores a growing scientific consensus that common purpose and solidarity lead to a collective joy that is a significant and necessary variable in healing the broader challenges we currently face: widening economic division, growing health acuity, the climate crisis, social isolation, and community fragmentation. Science suggests that joy is both a cause and consequence of pro-social health-promoting relational behaviors. Organized collective action can generate transformative joy and inspire people to create socioeconomic systems that support material well-being in balance with the earth and our common humanity. During this class, we will learn from historical and international examples how joyful solidarity builds understanding and collective accountability across social divisions, explore how joy is embodied and supported through organization, and discuss how the joyful solidarity of workers and health practitioners has contributed to national and global change. We will hear firsthand accounts from RNs whose experiences as health activists will help us to assess the role collective advocacy plays in addressing harmful social determinants of health while preventing caregiver burnout.

COURSE OBJECTIVES

Upon completion of Part II of this class, participants will be able to:

- Describe empirically-verified health benefits and multiplier effects of collective joy for individuals, institutions, and communities.
- Identify organizational structures and practices that support and sustain joyful solidarity.
- Discuss the immediate and long-term results of joyful patient and collective advocacy.
